

## CASE STUDY

Noble Foods was established in 1938 as a small family business collecting and selling eggs from local farms to local shops. Over the years they have progressed to become the UK's largest egg marketing and production company.

Three years ago Noble Foods changed the way packed eggs were transported through the logistics chain to a new MU Shipper. This allowed the Shipper unit to progress from being used just as a transportation device through to now making it a full merchandising unit being employed all the way through from factory to supermarket shop floor.

In order to maximise the efficiency and potential cost saving of these MU Shippers through higher vehicle load utilisation and a reduction in warehouse space, the need to double stack the Shipper was required. After looking at several options, Deans Foods approached Advanced Handling, a company renowned for their ability to design bespoke Materials Handling solutions.

"We needed a device that was light and manoeuvrable and could be used safely in our Packing Centres" explains Garth Whisker, Director, Packing Centres/Operations. "I approached Advanced Handling as they readily accepted the challenge of designing a machine that would meet all our requirements."

After successful trials in Centres, Advanced Handling ultimately supplied 12 modified Voyager Stackers. This award winning unit has the added benefit of being a modular construction which allows the unit to be transformed back to a standard stacker should the application change in the future.

"I was exceptionally pleased with the level of service and commitment that Advanced Handling were able to provide" continues Garth "we have since used them to successfully solve several other material handling issues that we had within the Group".

Advanced Handling has a team of Technical Sales and Design Engineers dedicated in providing optimum, often bespoke, solutions covering a wide range of materials handling issues.

## KEY FEATURES

- › Lightweight & durable
- › Modular construction – allowing the unit to be transformed back to a standard stacker if required
- › Increased safety in packing centre environment

## MEZZANINE LIFTS

The Mezzanine goods lift is designed to fully integrate with a mezz floor. Unlike the traditional goods lift no pit is required and therefore minimal building work is required.

## SCISSOR TABLES

Static and mobile scissor lifts – light, medium or heavy duty. Standard spec table can carry up to 8 tonnes and lift up to 5 metres high.

## VOYAGER

The Voyager is the modern ergonomic solution for any company. With its super lightweight aluminium frame it can lift and carry 1000 kilos to a height of 1.6 metres.

## STACKERS

If you are looking to lift and stack without a heavy outlay, nothing stands up to an Advanced Handling Stacker. They are versatile and come in a variety of applications.

## BESPOKE RANGE

We are at the cutting edge of scissor table technology offering intelligent solutions to precisely fit your needs –

whatever the need to lift, however heavy, to whatever height, in whatever situation – designed by our own in-house technical team.

## SERVICE

Advanced Handling has a team of experienced, dedicated and professional service technicians available to provide exceptional after-sales support throughout the United Kingdom. This ensures that your materials handling equipment meet your expectations day after day, week after week and month after month.

All of our products are offered with a tailored maintenance package specifically set up to meet with your business needs and ensure maximum up time is achieved at all times.
