

SCISSOR TYPE PALLET TRUCK

- 1000kg capacity
- Lifts to a maximum height of 800mm
- Manual or battery electric operated lifts available
- Fitted with a quick lift pump for speedier operation with lighter loads
- Powder coated for increased durability
- Quality design and manufacture: ergonomically designed and robustly constructed using high quality components
- Conforms to British and European regulations EN: 1757-4

Technical Features:

- The handle has 30mm grip thickness with solid ergonomically shaper 3-position trigger and protection for operators hands
- 180° steering- due to unique design of frame the truck can turn in it' own length
- The unit has a single ram for safe and smoother operation throughout lift- fewer wearing parts than a double ram
- Slow lowering and overload valve controls speed of lowering and protects from overload damage
- Safety gaps on frame and legs to prevent fingers from getting trapped
- Truck locks itself to the floor when raised for additional security
- Special lubricated bearings are fitted to all hinge points, lubricated for lift and therefore no maintenance is required
- 200mm polyurethane wheels making the unit easier to manoeuvre

Warnings:

- Scissor type pallet trucks should be operated on a smooth, dry, level floor surface
- The rated load of the truck should never be exceeded as this can be hazardous and cause damage to the truck
- The load must always be evenly distributed
- The manufacturer recommends that the operator wears protective shoes

Technical Specification:
